

LSEVBATTERIES 2025

We build tailored tech and energy.

We are a full-stack engineering team with expertise in the areas of electronic and mechanical engineering, design and web technologies, as well as a production line set to deliver turn key solutions.

**We build in the intersection between
Smart Cities, Mobility and Batteries.**

10 years in LSEV Made in Europe

2011 Foundation as a hardware/firmware house

EDMTECH was founded by Paulo Alves, a young entrepreneur who wanted to create custom electronics solutions for his clients.

As the company's core competencies grew stronger, more sophisticated projects were included in its portfolio.

2016 Gira Bikesharing Project

The Gira bikesharing project for Lisbon was EDMTECH's biggest project up to that point and a turning point in its strategy.

EDMTECH established itself as an **engineering reference designing, producing and maintaining a large and robust battery ecosystem.**

To this day, these batteries have ran over 50 million kms, enough to go to the moon and back 100 times!

Present Day Battery Design and Manufacturing

As EDMTECH's battery expertise and production capacity grows, we have been able to **design and manufacture batteries ranging from LEVs, Industrial storage and applications.**

We are based next to you !

Close Design.

Close Production.

Close Shipping.

Close Support.

Close After-Sales.

EDMTECH LSEV Batteries

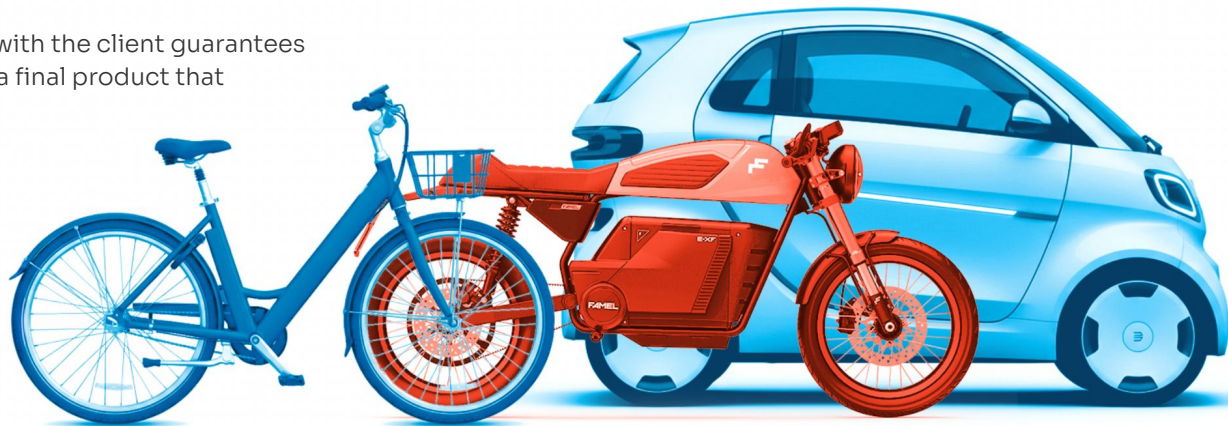

Low Speed Electric Vehicles

EDMTECH's LSEV batteries range the entire LSEV spectrum, from L-Type 1 to L-Type 7, and appropriate regulations.

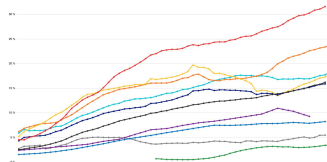

We design and manufacture batteries according to each product specifications.

Engineering + Production.

An open channel of communication with the client guarantees a smooth development process and a final product that exceeds expectations.

The L-Category Market is reshaping the world. Batteries are powering it.

“Light electric vehicles (LEVs) in Europe are booming. The assortment of vehicle solutions is becoming increasingly diverse, appealing to more target groups. The use cases are also becoming more varied. In passenger transport, there is an explosion of sharing systems, not just e-scooters, but also electric cycles, electric cargo cycles, e-mopeds and light three- and four-wheeled vehicles. Shared micromobility is booming in many cities and has become part of the local mobility ecosystem.”

-ERTRAC, 2023

Our Complete Range — L1e to L2e

L1e and L2e vehicles demand compact, lightweight, and cost-efficient battery solutions. These platforms typically face strict packaging constraints, high vibration environments, and require robust safety and waterproofing.

A custom solution provide a perfect fit for your needs and your market's. A higher volume of units demands an impeccable after sales service.

L1e

L2e

Category

Description

Light two-wheel powered vehicle (e.g., mopeds or powered cycles)

Three-wheel moped

Max Design Speed

≤45 km/h

≤45 km/h

Engine / Power Limits

≤50 cm³ (combustion) or
≤4 kW (electric)

≤50 cm³ or ≤4 kW

Unladen Mass Limits

Not specified

≤270 kg

Our Complete Range

— L3e to L5e

L3e, L4e and L5e vehicle architectures vary significantly, making customization critical for achieving the right balance between performance, range, and weight.

Our tailored battery systems provide precise fitment, advanced BMS control, and the ruggedness needed for demanding two and three-wheel platforms.

Category	 L3e	 L4e	 L5e
Description	Two-wheel motorcycle (without sidecar)	Two-wheel motorcycle with sidecar	Powered tricycle (symmetrical wheels)
Max Design Speed	>45 km/h	>45 km/h	>45 km/h
Engine / Power Limits	>50 cm ³ or >4 kW	>50 cm ³ or >4 kW	>50 cm ³ or >15 kW (if applicable)
Unladen Mass Limits	Not specified	Not specified	Not specified

Our Complete Range — L1e to L5e

We develop custom solutions for a variety of L1e to L5e vehicles. We also have a growing range of proprietary battery models ready to go.

Our sales team can guide you through your decision making process with ease to make sure your project is powered the right way, at a fair cost.

 **EU Compliance Ready**

Batteries must have minimum IP resistance defined by the new EU Batteries Regulation by 2025

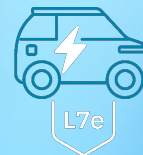

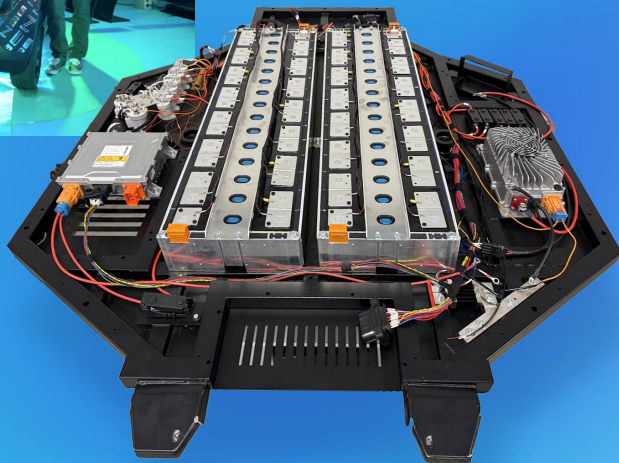

Our Complete Range

— L6e to L7e

L6e and L7e platforms require automotive-grade safety, higher capacity, and efficient thermal management within tight vehicle envelopes. These vehicles often support commercial or shared-mobility use, making reliability and lifecycle performance essential.

We design and manufacture bespoke battery solutions that integrate you complex architecture seamlessly, meet all regulatory requirements, and deliver stable performance in real-world duty cycles.

Category

Description

Light quadricycle (mini car-like)

Heavy quadricycle

Max Design Speed

≤45 km/h

No limit specified

Engine / Power Limits

≤50 cm³ or ≤4 kW
(passenger)/≤6 kW (goods)

≤15 kW

Unladen Mass Limits

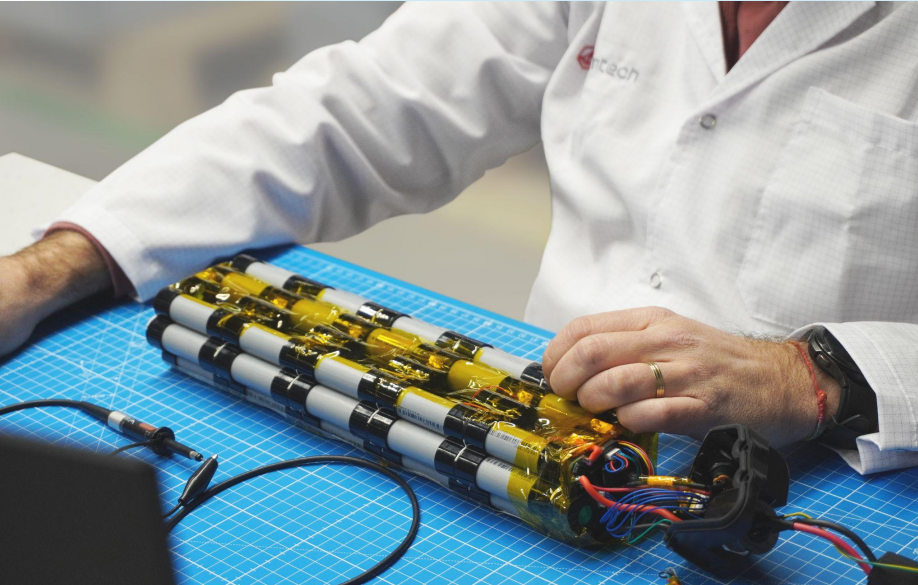

≤425 kg (goods) or
≤350 kg (passenger)

≤550 kg (goods) or
≤400 kg (passenger)

100% tailored to your needs

1. Vehicle specs → 2. Duty cycle analysis
- 3. Cell selection → 4. Pack engineering
- 5. Prototyping / Testing → 6. Certification support
- 7. **Your platform powered by your battery**

Battery EOL & Repair

One of EDMTECH's first major projects involving e-bike batteries included the repair of 4,000 batteries for a major Dutch client.

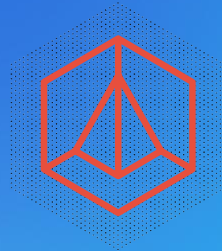

Battery repair involves working with variables that may be beyond our control. From that experience, we developed a very **rigorous phased process:**

- + Analysis
- + Inspection
- + SOP Design and Implementation
- + Specialized Team Repair

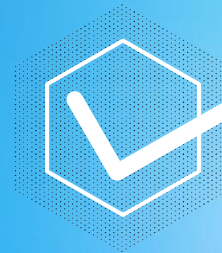

1. Portugal based

- Flexible Batch Deliveries
- Close Project Follow-up
- Easy After-Sales Support
- Local Industrial Ecosystem

2. Development

- IoT Ecosystem Development
- Multidisciplinary Engineering Team
- Custom BMS Design and Integration
- Enclosure Design and Production

3. Quality Control

- High standard QC
- Thermal Analysis & Validation
- Structural Safety Analysis

Our motto is ENERGY FOR LIFE.

thank you,

we'd like to hear more from you.
